

Lab: Text Processing

Problems for exercise and homework for the "JS Fundamentals" Course @ SoftUni.

Submit your solutions in the SoftUni judge system at: <https://judge.softuni.org/Contests/1705>

Print Characters

Write a function that **receives a string** and **prints all the characters** on separate lines.

Input / Output

Input	Output
'AWord'	A W o r d
'Sentence'	S e n t e n c e

Hints

Loop through the string and print each character.

Substring

Write a function that **receives a string** and **two numbers**. The numbers will be a **starting index** and **count** of elements to substring. Print the result.

Input / Output

Input	Output
'ASentence', 1, 8	Sentence
'SkipWord', 4, 7	Word

Hints

Create a new string that takes the needed amount of elements from the given string.

Censored Words

Write a function that **receives a text** as a first parameter and a **single word** as a second. Find **all occurrences** of that word in the text and replace them with the corresponding count of '*'.

Input / Output

Input	Output
'A small sentence with some words', 'small'	A ***** sentence with some words
'Find the hidden word', 'hidden'	Find the ***** word

Hints

Save the new text in a new variable.

The repeat() function should take the length of the word and return that amount of stars '*'.

Count String Occurrences

Write a function that **receives a text** and a **single word that you need to search**. Print the number of all occurrences of this word in the text.

Input / Output

Input	Output
'This is a word and it also is a sentence', 'is'	2
'softuni is great place for learning new programming languages', 'softuni'	1

Hints

Split the sentence into words and create a **counter** that stores how many times the searched word occurs.
